# Experience

**Project: DirectBazaar**

Company: Elaunch Solution Pvt. Ltd.

Description: DirectBazaar is an MLM (Multi-Level Marketing) system that enables member creation and management using binary plans. The platform also provides additional features such as online bus booking, mobile recharge, and integrated payment gateway services.

Technologies Used:

Frontend: JavaScript, Moment.js, HTML, CSS, Bootstrap, jQuery, Ajax

Backend: C#, ASP.NET MVC, Microsoft SQL Server 2012

**Project: MobiGo**
Company: Elaunch Solution Pvt. Ltd.
Description: MobiGo is an Affiliate Shopping Portal that redirects users to popular e-commerce websites such as Flipkart, Amazon, and others. The platform provides cashback to users for purchases made through the portal and maintains a comprehensive purchase history along with a wallet system where cashback is credited upon order confirmation.

Technologies Used:

- Frontend: JavaScript, HTML, CSS, Bootstrap, jQuery, Ajax
- Backend: C#, ASP.NET MVC, Microsoft SQL Server 2012

Team Size: 3 Developers

**Project: RitzPay**
Company: Elaunch Solution Pvt. Ltd.
Description: RitzPay is a cryptocurrency trading platform designed for buying, selling, and managing digital assets in the dynamic cryptocurrency market. The system provides features such as real-time market analysis, automated trading algorithms, and risk management tools to help traders execute informed trades and monitor market trends. It ensures secure and efficient transactions through encryption and two-factor authentication mechanisms.

Technologies Used:

- Backend: ASP.NET MVC, Microsoft SQL Server 2014

Team Size: 2 Developers

**Project: ApnaShop**
Company: Elaunch Solution Pvt. Ltd.
Description: ApnaShop is an e-commerce shopping cart application designed to streamline online retail transactions, allowing users to browse, select, and purchase products or services efficiently. The system is integrated with an MLM (Multi-Level Marketing) platform to manage member-based sales and commissions.

Technologies Used:

- Frontend: HTML, CSS, jQuery, Ajax, Bootstrap
- Backend: ASP.NET MVC, Web API, Microsoft SQL Server

Team Size: 4 Developers

**Project: GiftShare**
Company: Elaunch Solution Pvt. Ltd.
Description: GiftShare is a funding management system designed to facilitate the collection, allocation, and management of financial resources for various initiatives and projects. The platform supports multiple funding sources such as investors, donors, and grants, providing a structured mechanism for distributing funds efficiently to achieve defined objectives.

Technologies Used:

- Frontend: HTML, CSS, JavaScript
- Backend: C#.NET, ASP.NET MVC, Entity Framework, LINQ, Microsoft SQL Server (Stored Procedures)

Team Size: 3 Developers

**Project: Ventura**
Company: Elaunch Solution Pvt. Ltd.
Description: Ventura is a flight booking system designed to facilitate seamless flight search, booking, and management processes. The platform provides real-time flight availability, fare details, and booking confirmations through secure API integrations.

Technologies Used:

- Frontend: Angular 4, HTML, CSS
- Backend: ASP.NET MVC, Web API 2, Microsoft SQL Server 2014, Entity Framework, LINQ, Stored Procedures

Team Size: 3 Developers

**Project: LawyerApp (Kasbi)**
Company: Elaunch Solution Pvt. Ltd.
Description: LawyerApp is a Court Management System designed to streamline and automate court administration and case management processes. The system includes modules for case registration, document tracking, scheduling, and reporting, ensuring efficient and transparent handling of legal proceedings.

Technologies Used:

- Frontend: HTML, CSS, JavaScript
- Backend: ASP.NET MVC, Microsoft SQL Server 2014, Entity Framework, LINQ, Stored Procedures

Team Size: 1 Developer

**Project: BinExLive**
Company: Elaunch Solution Pvt. Ltd.
Description: BinExLive is a cryptocurrency trading platform designed for secure and efficient buying, selling, and management of digital assets in the volatile crypto market. The system provides real-time market analysis, automated trading algorithms, and risk management tools, allowing traders to execute informed trades and monitor price fluctuations. It includes robust security features such as encryption and two-factor authentication to safeguard user assets and transactions.

Technologies Used:

- Frontend: Angular 4
- Backend: ASP.NET MVC, Web API 2, Microsoft SQL Server 2014, Stored Procedures

Team Size: 2 Developers

**Project: RSVP**
Company: S.M. Solutions Pvt. Ltd.
Description: RSVP is an event and restaurant management system designed to simplify event scheduling, guest management, and restaurant operations. The platform is hosted on Microsoft Azure, utilizing four separate App Service instances for Auth, Web API, Admin Panel, and Guest Panel. It supports authentication via OIDC flow using cookies for local and social media logins, and JWT tokens for API authentication. Authorization is managed through a custom handler based on user permissions specific to each restaurant or event.

Modules:

- Organizer: Allows event organizers to schedule, manage, and track bookings and guest attendance efficiently.
- Guests: Enables guests to explore events and make reservations seamlessly.
- Booking: Developed using StencilJS web components for cross-panel reuse, ensuring consistency across Admin, Guest, and POS panels.
- POS (Point of Sale): Built using RxJS and Ionic/StencilJS to manage restaurant table bookings through a reactive, event-driven design.

Technologies Used:

- Frontend: Angular 9, NgRx (State Management), RxJS, HTML, CSS, StencilJS
- Backend: .NET Core, Web API, Entity Framework Core, Microsoft SQL Server, Azure Functions
- Cloud Hosting: Microsoft Azure (App Services)

Team Size: 2 Developers

**Project: Spotter**
Company: ProjectTree Pvt. Ltd.
Description: Spotter is a Health Insurance Management web application designed to manage employee and worksite-related insurance operations efficiently. The system consolidates multiple sub-applications—OccDoc, PartnerPanel, and CheckHire—into a single integrated platform. It follows a microservices architecture to handle different modules, services, and reporting functionalities, ensuring scalability and modularity across applications.

Technologies Used:

- Frontend: Angular 12
- Backend: .NET Core Web API, Microsoft SQL Server 2014, Stored Procedures

Team Size: 3 Developers

**Project: GMS (Get My Service)**
Company: Yosa Technology Pvt. Ltd.
Description: GMS (Get My Service) is a Service Provider Management System designed to streamline service delivery across multiple domains such as healthcare, IT, and consulting. The platform includes modules for client management, scheduling, billing, and resource allocation, helping service providers efficiently manage appointments, track customer data, and automate invoicing. The system aims to enhance operational efficiency, improve customer satisfaction, and simplify administrative workflows.

Technologies Used:

- Frontend: Angular 12
- Backend: Firebase

Team Size: 2 Developers

**Project: MSM (Medical Service Management)**
Company: Yosa Technology Pvt. Ltd.
Description: MSM is a Medical Service Management system designed to optimize healthcare service delivery by streamlining operational processes, improving patient care coordination, and ensuring compliance with healthcare regulations. The platform focuses on efficient resource allocation, staff coordination, and data-driven decision-making to enhance healthcare quality and patient outcomes.

Technologies Used:

- Frontend: Angular 17

Team Size: 2 Developers

**Project: Dr.Pro**
Company: ProjectTree Pvt. Ltd

Description:
Upgrade your healthcare experience with Dr.Pro, a simple, fast, and intuitive software designed for doctors and clinics. The system streamlines the doctor–patient relationship by offering efficient appointment management, patient tracking, and communication tools. It helps healthcare professionals manage their practice digitally with ease and improve overall service delivery.

Frontend: Angular, PrimeNG
Backend: .NET
Team Size: — *5*

**Project: AJE Coke**
Company: ProjectTree Pvt. Ltd.
Description: AJE Coke is a laboratory management and reporting system designed to handle vessel-based sample collection, testing, and reporting workflows. The platform enables complete traceability, dynamic test execution, and automated result evaluation to ensure data accuracy and compliance with client and regulatory standards. It supports multi-format analytical reporting, improving operational efficiency and reducing manual intervention in lab operations.

Technologies Used:

- Frontend: Angular 17
- Backend: .NET Core 8

- Reports: PDF and Excel Generation

Team Size: 2 Developers
